DETAILED ACTION

Election/Restrictions

1. Applicant's election embodiment I of claims 7-8 filed on April 29, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 8 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The limitation "a relative dielectric constant of the interlayer insulating film is smaller than that of a silicon oxide film" is enabled since the specification (page 17-18) described that the interlayer insulating film (601) is formed of silicon oxide.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 7-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7, lines 6-7, the limitation "the adjacent hole patterns are only partially opposite to each other" renders the claim indefinite. It is not clear how "the adjacent hole patterns" being opposite each other can be considered as **only partially opposite**.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 7, as best understood, is rejected under 35 U.S.C. 102(b) as being anticipated by Applicant Admitted Prior Art (fig. 17).

Applicant Admitted Prior Art (page 3, fig.17) discloses a method for manufacturing a semiconductor memory device comprising:

depositing an interlayer insulating film (1704) on a semiconductor substrate (not shown) provided with contact plugs (1702);

patterning a mask pattern on the interlayer insulating film, the mask pattern having a layout in which a plurality of hole patterns having the same shape are arranged so that the adjacent hole patterns are opposite to each other;

Art Unit: 2814

forming holes (1705) for storage nodes in the interlayer insulating film by etching with the mask pattern;

forming the storage nodes (1706) in the holes so as to be connected electrically to the contact plugs;

forming a capacitor insulating film (1707) on the storage nodes; and

forming a plate electrode (1708) on the capacitor insulating film.
